## **Novus Introduces Attenzia LED Lighting** *The Perfect Light to Illuminate Your Space*

*Peterborough, NH, May 1, 2018 -*

Novus, a worldwide leader in premium office products, monitor arms, and office organization, introduces Attenzia LED lighting. Attenzia merges exceptional lighting performance with a modern, adjustable design to perfectly illuminate any workspace.

Attenzia's recessed LEDs cast an even light that reduces glare and reflection. Set at a color temperature of 4,000 kelvin, it provides a soft, vibrant light that's easy on the eyes and reduces strain. Attenzia features variable dimming with memory for easy control over the

brightness level of your space. Pivoting joints, aluminum construction, and a thin rotating lamp allow you to focus the light right where you need it.

Attenzia's two sizes include **Attenzia task** with 742 lumens for more focused lighting, and **Attenzia complete** with 1708 lumens that brightens your entire workspace.

"It's a functional work of art," said Patty Keans, National Account Manager for Novus' More Space System. "Attenzia's combination of brightness, features, and aluminum finish make it a must have in today's modern office."

Attenzia lights are German engineered and designed for quality and durability. The LEDs are guaranteed for 50,000 hours of use and the light is backed by a 5 year warranty.

Novus' More Space System delivers a clean look, improved ergonomics, and the ability to customize your workspace. Designed and developed in Germany, Novus offers premium monitor arms, lighting, and office organizational products for the modern workplace.
